## PRICES IN CANADA AND OTHER COUNTRIES, 1939\*

The movement of prices as indicated by the official figures for the principal countries was slight before the outbreak of war. The trend of industrial activity was upward in this period but had not been reflected in advances in world price levels though there was an upward tendency in some countries. "Before the outbreak of the present war the trend of world production was upwards, and, in view of the gradual recovery in the United States, the stage was set for a rise in world prices. As soon as hostilities began, prices on the world market showed a sharp rise, assisted by a heavy re-stocking movement." (London *Economist*, January 20, 1940.) The increases were greatest in the prices of farm products and raw materials, important factors in the movement being the increased demand for many commodities arising from the war as well as to the exchange situation and the increased cost of transport. In Great Britain the advance in wholesale prices since August was 23 per cent, in Canada 13 per cent, Switzerland 14 per cent and in the United States 5.5 per cent.

### The Movement of Retail Prices and the Cost of Living in Canada during 1939

The index number of the cost of living was at a slightly lower level during the first nine months of the year than had prevailed during the greater part of 1938. Following the outbreak of war advances occurred in the prices of certain foods and in fuel and clothing with the result that for December 1939 the index was about four per cent higher than at the beginning of September and about three per cent higher than at the beginning of the year. Changes during the year in rent and in miscellaneous items were slight. The figures for the index (prices in 1913 as 100) are 135 in December, 130 at the beginning of September as compared with 131 for January and for December, 1938. In 1938 there was little movement the index being 132 from January to November except for an increase to 134 in August.

At the end of 1939 the index for all items was about 12.5 per cent higher than in the summer of 1933 when the low point during the depression was recorded. The increase since that time was due in large part to advances in three groups, foods being 28 per cent higher, clothing 15 per cent higher and rent 14 per cent. Advances in fuel and

miscellaneous items were slight. In spite of the advance in the cost of living since 1933 the index number for all items in December, 1939, was about 15 per cent lower than at the end of 1929 the figures being 135 and 160 respectively. All groups were lower in this comparison.

Changes in the food group were the most important factor in the movement of the "all items" index number during 1939. This group declined slightly in February due mainly to lower prices for eggs. Between February and September there was little movement in the index for the group, increases in some items, chiefly beef and potatoes, being offset by declines in others, chiefly lard, butter and cheese. Following the outbreak of war all of the list of twenty-nine staple foods included, advanced in price with the exception of milk and bread, the most important increases being in lard, beef, eggs, butter, flour, prunes, potatoes, coffee and tea. The increase between January and December was 5.5 per cent and between September and December about 8 per cent. In December, 1939, the index for the group was 119 as compared with 91 in February and March, 1933 (the low point for this group) and 161 in December, 1929.

Rent for workingmen's houses has changed little since the spring of 1938 when there was an advance of about 4 per cent. The recovery from the low point for the group in 1934 down to the end of 1939 was slightly more than 16 per cent. The index is now about 6 per cent lower than in 1929.

In the fuel and light group there was a seasonal fall in the spring in the price of United States anthracite coal but this was more than offset by increases in the autumn resulting to some extent from advances in prices at the mines and from the unfavourable exchange situation. The war revenue tax of 8 per cent on bills to domestic consumers of gas and electricity also contributed to the advance in this group the index for which was 144 for December, 138 for the period June to September and 141 at the beginning of the year.

The index for the clothing group was unchanged at 117 until September when there was a slight advance followed by a further increase of about four per cent resulting in part from the war demands, particularly for wool. The index was 123 in December which was about 15 per cent higher than the low point in 1933 but still about 22 per cent lower than in 1929.

\* The Dominion Bureau of Statistics issues reports on prices with comprehensive figures, as follows: weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and other countries).

††An allowance for the cost of clothing and sundries would increase the figure by about 50 per cent.

†Kind most sold since October, 1922.

prices of grains and certain non-ferrous metals were important factors in this movement. Following the outbreak of the war the index moved upward month by month to the end of the year when the number was 81.7 an increase of 13 per cent during the four months and at a level about 11.5 per cent higher than in January, 1939. It was, however, lower than during the greater part of 1937. At the end of 1939 the index number was more than 28 per cent higher than at the low point in the depression reached in February, 1933, but still about 15 per cent lower than in December,

1929. The advance since August was due in large part to higher prices for grains, milled products, vegetable oils, tea, coffee, hides, leather, boots and shoes, livestock, dairy products, raw textiles and certain textile products, wood pulp, rolling mill products, scrap iron, and certain non-ferrous metals.

The prices of raw materials and of farm products advanced more than finished products during recent months and are still at relatively lower levels. An index number of "raw and partly manufactured goods" rose from 62.8 for August, 1939, to 74.2 for December an in-

crease of 18 per cent while "fully and chiefly manufactured goods" advanced 11 per cent from 72.8 for August to 81.1 for December.

The index number of Canadian farm products advanced slightly in the early months of the year and then declined until August when the number was 58.4. The main influence in this was the movement in grain prices. From August to the end of the year the advance in the group was nearly 20 per cent the index being 69.1 for December. Field products increased 22 per cent and animal products 15 per cent.

In the grouping according to chief component materials all groups were slightly lower in August than at the beginning of the year with the exception of Textile Products and Wood and Wood Products. Of the eight principal groups all were higher at the end of the year than in August and higher also than in January. In the latter comparison Vegetable Products advanced 19 per cent, Textile Products 24 per cent, Wood Products 12 per cent, Animal Products 10 per cent with smaller increases in other groups.

TABLE III.—COST PER WEEK (IN TERMS OF THE AVERAGE RETAIL PRICES IN THE DOMINION AND AND RENT ENTERING

## Prices in Great Britain and Other Countries

The accompanying tables numbered VIII to XXV give such index numbers of retail prices of foods and cost of living and of wholesale prices in several of the principal commercial and industrial countries as are available for 1939 and for preceding dates to show the movements of prices in comparison with those in Canada. The information in the following tables is obtained for the most part from publications of the governmental or other authority constructing the index number, but in some cases from the Monthly Bulletin of Statistics of the League of Nations, Geneva, which publishes figures for some countries. The quarterly supplement to Prices and Price Indexes issued by the Dominion Bureau of Statistics, Ottawa, also contains index numbers for many countries.

As a result of war conditions the information for certain countries is not as complete in the present report as heretofore, there being no data for some countries since September. From some other countries the information is received later than previously.

### Great Britain and Northern Ireland

**COST OF LIVING.**—The Ministry of Labour's index number (Table X) is based on the standard of living of a workingman's family prior to the outbreak of war in 1914; the figures are for the first of the month so that the index for October is the first to reflect the effects of war conditions. Prior to the outbreak of the present war cost of living fluctuated only within narrow limits the average for the first nine months of 1939 being 155·3 as compared to 156·3 during 1938. On October 1, the index rose to 165 or 6·5 per cent above that for September 1; by December 1, it had risen to 173 or 11·6 per cent since the outbreak of war. The indexes of food prices in 1939 averaged 136·4 for the months prior to the outbreak of war the average for 1938 having been 140·5. On October 1, the index of food prices was 150 or 8·6 per cent higher than the previous month; by December 1, it had risen to 157 or 13·8 per cent since September 1. From the middle of 1937 until October, 1939, there were practically no changes in the prices of clothing, the index having been between 205 and 210 each month. On October 1, the index rose to 220·225 and by December 1, it was 245 or 18·1 per cent higher than at the outbreak of war. Since the outbreak of war fuel and lighting material prices increased 8·3 per cent and the index of sundries rose 5·0 per cent.

**WHOLESALE PRICES.**—As measured by the Board of Trade index number, on the base 1930=100, the average of wholesale prices was higher in 1939 than in 1938 by 1·2 per cent, the index numbers for the two years being 102·6 and 101·4 per cent respectively. The rise in prices in 1939 was due to the increases recorded since the outbreak of war, the average of the index numbers for the four months, September to December (113·5) being higher by 11·9 per cent than the index for the year 1938, while the average for the eight months January to August (97·5) was lower by 3·8 per cent. The index of prices of food and tobacco was 32·9 per cent higher for December than for August while that for industrial materials and manufactures was 18·5 per cent higher. During the same period the "all articles" index increased 23·2 per cent.

### France

**COST OF LIVING.**—Early in the year 1939 the General Statistical Office issued a new index number based on the cost of living for a workingman's family in Paris, 1930=100. This index was to appear quarterly but so far only indexes for February and May have appeared for the year 1939. The index was computed for dates back to 1930 and shows that prices have risen steadily since May, 1936, when the index was at 77·8. In May, 1939, the index had risen to 122·6.

**WHOLESALE PRICES.**—The index of the General Statistical Office which rose from 612 in January, 1938, to 676 for January, 1939, continued to rise until May, 1939, when it reached 693. The succeeding three months each showed decreases, the figure for August being 672. Since that time this index has not been published.

### United States

**COST OF LIVING.**—The latest available index number of the cost of living compiled by the Bureau of Labor Statistics (Table XXIV) is that for September 15, 1939, at which time the index for all items was 144·2. A year earlier this index was also 144·2 but during the first half of 1939 it declined to 142·5.

**WHOLESALE PRICES.**—The index of wholesale prices published by the Bureau of Labor Statistics (Table XXV) reached a high point for recent years in April, 1937, when it was 88·0. From that date until August, 1939, when it was 75·0, it showed a gradual decrease. In September it rose 79·1 and at the end of the year it was 79·2.
